Do you know how many planets the world “uses” in a year? 1.7 Earths.

The Earth Overshoot Day has moved from late September in 2000 to July 29 in 2021, indeed.

Sustainability affects everyone and every aspect of our life, so what about the film industry?

For a typical tentpole production, resource consumption data analysis shows that its total:

- energy consumption could power Times Square for 5 days
- fuel consumption could fill an average car tank 11,478 times
- air miles equate to 11 one-way trips from the Earth to the moon
- waste generation equates to the weight of 313.5 blue whales
- plywood use amounts to the volume of 2.5 cargo planes
- plastic bottle usage equates to yearly average use of 168 people

**What happens between thinking
of a story and making it real?**

TorinoFilmLab is the answer

Since 2008 it is the place to go if you have a story for the screen in mind.

TFL accompanies authors and professionals in the realisation of their ideas: from developing a screenplay in the writing process to standing side by side to film teams in facing the different aspects of production, from supporting a film financially and with customised consultancies to providing it with visibility and networking opportunities. All of that until the film is ready to fly solo.

As an international audiovisual laboratory we couldn't exist without the pool of talents from all over the planet met along the path – more than 1600 between scriptwriters, producers, directors, story editors – and the squad of 170 experts in the fields of audiovisual training, script consulting, production and promotion that have been supporting them in the creation of their films and tv series.

During the last 14 years, 152 stories developed within TFL kicked off at the most prestigious film festivals and reached the audience.
